L-1 Intro to Computer Networks

Outline

• Administrivia

• Layering
Dramatis Personae

• Professor: Randy H. Katz
  • Facebook: [http://berkeley.facebook.com/people/Randy_Howard_Katz/1241523](http://berkeley.facebook.com/people/Randy_Howard_Katz/1241523)
  • Email: randy@cs.Berkeley.edu
  • Office hours: Tu 1:00-2:00, W 3:00-4:00, 413 Soda Hall

• Sorry, no Teaching Assistant!

• Course Info
  • Web: [http://www.cs.Berkeley.edu/~randy/Courses/CS268_F08](http://www.cs.Berkeley.edu/~randy/Courses/CS268_F08)

Goals and Objectives

• Understand state-of-the-art in network protocols, architectures, and applications

• Understand process of networking research
  • Typical constraints and thought processes used in networking research

• Different from undergraduate networking (EECS 122)
  • i.e., training network programmers vs. training network researchers
When Thinking About Research …

“Look for what is so obvious to everyone else that it’s no longer on their radar, and put it on yours. Seek to uncover assumptions so implicit, they are no longer being questioned. Question them.”

• Rodney Brooks, Co-director of CSAIL, MIT

Particularly relevant advice for network research

• Is the current network architecture and decisions appropriate for wireless networks, sensor networks, real-time networks, enterprise networks, datacenter networks, etc.?

Web Page

• Check regularly!!

• Course schedule
• Reading list
• Lecture notes
• Announcements
• Project ideas
• Exams
CS 268 Blog Assignments

• For each lecture, you will create a “public review” of paper(s) due for that class that:
  • Briefly summarizes paper (1-2 paragraphs)
  • Provides background/related material (1-2 paragraphs)
  • Critiques paper and suggests discussion topics (2-3 paragraph)
    • Try to be positive…
    • Why or why not keep this paper in syllabus?
    • What issues are left open for future research?
    • What are the important implications of the work?

Materials on Course Syllabus Page

• Research papers
  • Links to pdfs on Web page
  • Two papers per class meeting
  • Combination of classic and recent work
  • ~40 papers
• Lecture Notes
  • ppt posted, but I will minimize its in-class usage
  • Seminar/discussion style and participation counts!
• Recommended textbooks
  • For those who need to review their networking background
  • Peterson & Davie/4ed or Kurose & Ross/4ed
Course Grading

• Class + paper blog participation (20%)
  • Makes sure that you read the papers before class

• Two person research project (40%)
  • Substantial independent research project
  • You learn a lot by working together
  • Several class meetings dedicated to projects

• Two Quizzes (40%)
  • Closed book, in-class
  • Makes sure that you understood the papers

What about the Waitlist?

• We should be able to accommodate all graduate students who want to take the class

• Undergraduate students should talk to me to determine if this is the right course for them
  • Undergraduates will have to partner with another undergrad to do a research project
Class Topic Coverage

• Little on physical and data link layer
• Little on undergraduate material
  • Supposedly you already know this, though some revisiting/overlap is unavoidable
  • Focus on the why, not the what
• Focus on network to application layer
• We will deal with:
  • Protocol rules and algorithms
  • Investigate protocol trade-offs
  • Why this way and not another?

Lecture Topics

**Traditional**
• Layering
• Internet architecture
• Routing (IP)
• Transport (TCP)
• Queue management (FQ, RED)
• Naming (DNS)

**Recent Topics**
• Multicast
• Mobility/wireless
• Active networks
• QoS
• Network measurement
• Overlay networks
• P2P applications
• Datacenter networking
Laptop Policy

• Should we have an open/closed laptop policy?
  • Good for viewing/annotating papers and electronic note taking
  • Bad for distractions (chat, ebay, email, facebook, solitaire, twitter, etc., ...)
• Class vote -- you choose!

Outline

• Administrivia

• Layering
What is the Objective of Networking?

- Communication between applications on different computers
- Must understand application needs/demands
  - Traffic data rate
  - Traffic pattern (bursty or constant bit rate)
  - Traffic target (multipoint or single destination, mobile or fixed)
- Delay sensitivity
- Loss sensitivity

Back in the Old Days…
Packet Switching (Internet)

Packet Switching

- Interleave packets from different sources
- Efficient: resources used on demand
  - Statistical multiplexing
- General
  - Multiple types of applications
- Accommodates bursty traffic
  - Addition of queues
Characteristics of Packet Switching

- Store and forward
  - Packets are self contained units
  - Can use alternate paths – reordering
- Contention
  - Congestion
  - Delay

Internet[work]

- A collection of interconnected networks
- Host: network endpoints (computer, PDA, light switch, …)
- Router: node that connects networks
- Internet vs. internet
Challenge

• Many differences between networks
  • Address formats
  • Performance – bandwidth/latency
  • Packet size
  • Loss rate/pattern/handling
  • Routing
• How to translate between various network technologies?

How To Find Nodes?

Computer 1

Internet

Computer 2

Need naming and routing
Naming

What’s the IP address for www.cmu.edu?

It is 128.2.11.43

Computer 1 Local DNS Server

Translates human readable names to logical endpoints

Routing

Routers send packet towards destination

H: Hosts
R: Routers
Meeting Application Demands

- Reliability
  - Corruption
  - Lost packets
- Flow and congestion control
- Fragmentation
- In-order delivery
- Etc...

What if the Data gets Corrupted?

Problem: Data Corruption

Solution: Add a checksum
What if Network is Overloaded?

Problem: Network Overload

- Short bursts: buffer
- What if buffer overflows?
  - Packets dropped
  - Sender adjusts rate until load = resources \Rightarrow \text{"congestion control"}

Solution: Buffering and Congestion Control

What if the Data gets Lost?

Problem: Lost Data

Solution: Timeout and Retransmit
What if the Data Doesn’t Fit?

**Problem: Packet size**
- On Ethernet, max IP packet is 1.5kbytes
- Typical web page is 10kbytes

**Solution: Fragment data across packets**

```plaintext
GET index.html
```

What if the Data is Out of Order?

**Problem: Out of Order**

```plaintext
GET x.htmindexml
```

**Solution: Add Sequence Numbers**

```plaintext
GET index.html
```
Lots of Functions Needed

- Link
- Multiplexing
- Routing
- Addressing/naming (locating peers)
- Reliability
- Flow control
- Fragmentation
- Etc.…

What is Layering?

- Modular approach to network functionality
- Example:

```
    Application
    Application-to-application channels
    Host-to-host connectivity
    Link hardware
```
Protocols

- Module in layered structure
- Set of rules governing communication between network elements (applications, hosts, routers)
- Protocols define:
  - Interface to higher layers (API)
  - Interface to peer
    - Format and order of messages
    - Actions taken on receipt of a message

Layering Characteristics

- Each layer relies on services from layer below and exports services to layer above
- Interface defines interaction
- Hides implementation - layers can change without disturbing other layers (black box)
Layering: technique to simplify complex systems

E.g.: OSI Model: 7 Protocol Layers

- Physical: how to transmit bits
- Data link: how to transmit frames
- Network: how to route packets
- Transport: how to send packets end2end
- Session: how to tie flows together
- Presentation: byte ordering, security
- Application: everything else
OSI Layers and Locations

Layer Encapsulation
Protocol Demultiplexing

- Multiple choices at each layer

Is Layering Harmful?

- Sometimes …
  - Layer N may duplicate lower level functionality (e.g., error recovery)
  - Layers may need same info (timestamp, MTU)
  - Strict adherence to layering may hurt performance
Next Lecture: Design Considerations

- How to determine split of functionality
  - Across protocol layers
  - Across network nodes

- Assigned Reading
  - R1: End-to-end Arguments in System Design
  - R2: Design Philosophy of the DARPA Internet Protocols

- Friend me on Facebook so I can invite you to join the CS 268 facebook group
- Set up your blog site and send me its URL
