Background Data:
The Air War Game—Battle of Britain
Randy H. Katz
CS Division, EECS Dept.
University of California, Berkeley
Spring 2011

Background History
- May 1940: German Blitzkrieg in the West
  - German mechanized warfare shocks the Allies
  - Holland, Belgium fall in days, France defeated in 6 weeks
  - British Expeditionary Force (BEF) miraculously escapes at Dunkirk, leaving most of its equipment behind
- Operation Sea Lion: Germany poised to invade England
  - Triumphant Luftwaffe operates from airbases in Northern France through Norway

Air War Game
Early War Version
- Britain on defense
  - Defend on the sea and in the air
- Germany on offense
  - Neutralize the Royal Navy and soften the defenses in preparation for an amphibious assault against Southeastern England

Air Defense of England

Decisions Made in the 1930s
- Have the sides invested in the right technologies to achieve their goals?
  - Planes and pilots
  - Strategic vs. tactical capabilities
  - Offensive vs. defensive focus
  - Detection measures and countermeasures
  - Interception methods

**RAdio Detection And Ranging**

- Over the horizon detection
- Based on the principle of radio reflection

**Chain Home vs. Chain Home Low**

Shorter wavelengths, higher frequencies, greater precision in ranging, rotating antennas for better directional accuracy, suitable for night interception.

**Figure 1: Principles of CH (Chain Home) R.D.F. system**
Ground Control Intercept

Fig. 7.2 Forms of Radar Display On the left above, the 'A' scope, with a baseline corresponding to a fixed time interval. The transmitted pulse registers at the left, the return echo showing as a 'blip' at some distance to the right - the distance being proportional to the range to the target. On the right, the 'PPI' (plan position indicator), in which the radar is at the centre of the display, which shows not only distance but the direction of the target. In this illustration, North is assumed to be at the top.

Next Week: Strategic Bombing Offensive vs. Germany

- Fighters vs. Bombers
  - What are good targets?
  - Strategic vs. tactical plans
- Precision bombing
  - Daylight vs. nighttime raids, formation flying, escorts
  - Minimizing plane and crew losses while maximizing enemy destruction
- How do you intercept attackers?
  - Where is the enemy? Radar to observe planes at a distance, searchlights to track planes nearby
  - How to confuse the defender as to attacker’s plans and intentions?
  - Getting the fighters to arrive at where you expect to the bombers to be
